

## ***LITE-wire are now stockists of Technology-LED automotive products***

LITE-wire have today announced they are further expanding their product range by becoming one of the first distributors for Technology-LED, British manufacturers of LED interior and warning lighting products.

The new range includes the Cylon LED light head, a curved LED warning lamp which replaces the need for traditional beacons and lightbars, as well as LED interior lighting products.

Rob Corke, the company's Business Development Director commented "This new range fits perfectly within our product offering – continuing with our ethos of distributing well designed, reliable and innovative vehicle lighting products."

Additional features of the company's new interior lighting include PIR sensing as well as Touch-Sense. This allows users to switch their interior lights on and off using an in-built touch pad rather than a traditional switch.

Further new lines to this exciting new product range are also expected in the coming months.
